

AdlerandAllan

**Fast and effective spill response,
fuel, tank and waste services**

Adler and Allan is the market leader in the provision of rapid response services to the public and private sector. Operating from an unrivalled network of bases, we respond quickly and effectively to customer requirements from oil and chemical spillages, critical fuel deliveries and tank servicing to managing major turn-key installation and dismantling projects, disaster recovery and industrial cleansing.

Spill Response Services

Over many years, Adler and Allan has built the resources and skills to tackle the most challenging of situations from domestic tank leaks to major industrial disasters.

Highly trained professionals equipped with the latest spill and clean-up technology staff supported by a national network of rapid response centres, ready to mobilise at a moment's notice.

Spill services include:

- 24 hour emergency oil and chemical spill response
- Sampling and analysis
- Environmental site investigations
- Spill equipment and boom hire
- Mobile oil water separators
- Remediation of contaminated sites
- Project management and reporting

Related services include:

- Marine spill response
- Tanker rollover product recovery
- Site regulatory compliance audits
- Contingency planning
- Spill training and exercises

Spill services are available on a retainer contract basis for the reassurance of guaranteed response.

Adler and Allan is a fully accredited member of the UKSpill Association with the capability, equipment and geographical locations to deal with the full range of marine, fresh and ground water spills, road tanker rollovers and land remediation projects.

Fuel Services

Adler and Allan has been a fuel distributor for over half a century and has developed a loyal customer base because of its exceptional levels of service. We have built a reputation for taking on challenging deliveries and providing a 24 hour call out service for retained customers.

We supply the following fuels:

- Gas oil (red diesel)
- Derv (white diesel)
- Kerosene
- Unleaded petrol
- Heavy oils
- Ultra low sulphur gas oil

We can also arrange the delivery of a wide range of lubricants and oils.

Small packaged deliveries in 205 litre or 25 litre drums are available as are bowser deliveries by 4WD vehicle to inaccessible sites.

Temporary fuel tanks and tankers on standby can be provided for emergency situations, and fuel can be uplifted and transferred between sites.

Fuel can be sampled for B.S. compliance and checked for contamination. Dirty or non-compliant fuel can be treated with biocides or polished to recover clean fuel.

Related services include:

- Emergency fuel services
- Fuel uplifts and transfers
- Fuel polishing

Fuel Installation Services

Adler and Allan has established skills and expertise to service, design and install all equipment used to store and dispense fuels and lubricants.

Our OFTEC registered technicians can audit tanks for compliance and arrange remedial works or complete replacement.

Services include:

- Bespoke build steel tanks
- Installation of tanks and pipework in accordance with OFTEC guidelines and planning regulations
- Supply of GRP plastic tanks for domestic and industrial use
- Gauge and alarm servicing
- Tank inspections, repairs and maintenance
- General steel fabrication and site welding
- Tank and bund relining

Recent contracts include the building and operation of a fuel station for the construction phase of a major international sports event in East London, the installation of the fuel system for a new 'Energy from Waste' incinerator and the upgrade of a bulk fuel installation for the RAF's transport fleet.

Tank Services

Adler and Allan's reputation has been built on its experience of cleaning all types of storage tanks from small industrial tanks to major refinery and military holding tanks. All our operatives are highly trained to operate in confined spaces using breathing apparatus and jetting equipment.

Services include:

- Uplift and transfer of residual product
- Draining and disposal of tank bottoms and sludge
- Cleaning and purging of pipework
- Cold cutting techniques to access enclosed tanks
- Manual cleaning of tanks
- Remote cleaning using mechanical high pressure washer
- Testing and gas free certification

Additional services include:

- Masstech low pressure tank testing
- Non destructive testing
- Decommissioning of tanks using inert hydrophobic foam or foam concrete
- Removal of tanks using hot and cold specialist cutting equipment
- Dismantling of redundant plant and equipment
- Tank inspections to EEMUA159 Level 2

Branchand Tank Services is a specialist tank division of Adler and Allan.

A Division of AdlerandAllan

Industrial Water Jetting and Cleansing

Industrial Water Jetting Systems (IWJS) leads the sector in the use of high pressure water jetting for cleaning tunnels, drains, sewers, interceptors, tanks, pumping stations, sewage treatment tanks, canals and waterways. IWJS provide a cost effective and efficient service to a wide range of clients in the water sector and related industries. Substantial and continuous investment in new vehicles, plant and equipment allied to a skilled workforce has enabled the company to develop and maintain long term client relationships.

Water Jetting

A high pressure water jetting capability allows IWJS to undertake a wide range of surface cleaning projects including car parks, airport run-ways, bridges, buildings and retaining walls.

Where heavier and compacted materials cannot be removed with standard sewer cleaning equipment, high pressure jetting can often provide the solution.

Tankering

Operating a comprehensive range of vacuum tankers enables IWJS to deal with a wide range of liquid wastes from domestic sewerage to those arising out of industrial processes.

Drain and Sewer Cleaning

IWJS use the latest recycling technology to clean a variety of waste water systems and vessels in an environmentally friendly manner by reducing water usage, minimising waste generation and reducing facility downtime. We have mobile screening plants to reduce the waste removed from site. High performance jetting and suction units combining vacuum and air movement technology ensure that both liquid and compacted wastes can be efficiently dealt with for sewer and highway drainage projects.

Tunnel Cleaning

IWJS clean 90% of the UK and Ireland's road tunnels. We have developed a bespoke vehicle mounted cleaning unit designed by in-house personnel and constantly refine these units to meet the challenges presented by new tunnel configurations.

Operated by highly trained crews, the use of these machines on some of Britain's busiest motorways ensures that safe tunnel visibility standards are maintained with minimal road closures and traffic disruption.

Other Services Include:

- CCTV surveys
- Domestic drainage
- Septic tank emptying
- Culvert cleaning
- Wet well cleaning
- Sewage treatment tank cleansing
- Over pumping and sludge uplifts
- Digester/aeration tank cleaning
- 24/7 emergency response

Industrial Water Jetting Systems is a specialist cleansing division of Adler and Allan.

Waste Management Services

Adler and Allan is fully licensed to handle commercial and industrial waste disposal including waste oil and hazardous waste.

You can arrange for collection by our waste management team who will classify, package and arrange disposal of most types of waste in accordance with the Hazardous Waste Regulations. Waste types include bulk quantities of:

- Waste oil
- Liquid industrial wastes
- Packaged hazardous wastes
- Laboratory chemical smalls

Our facilities can accept, manage and treat a varied range of waste materials. Our acceptance criteria encompass toxics, flammables, oxidizers as well as non-hazardous materials. The sites can accept materials in quantities ranging from lab smalls to bulk tanker loads. Where we do not have in-house facilities we can always find a viable and cost effective disposal route for your wastes.

As with all its services, Adler and Allan is on call 24 hours a day to deal with emergency jobs including the safe collection of hazardous waste.

Related services include:

- Site clean-up and plant removal
- Environmental remediation
- Fly-tipped waste
- Gutter cleaning
- Fire and flood water disposal
- Sharps disposal

Separator Services

Adler and Allan Separator Services will ensure that your pollution prevention measures are working at peak levels of performance keeping the environment clean, and the regulators satisfied.

Our services will benefit both you and the environment:

- Avoid the risk of expensive fines, clean up costs and bad publicity
- Protect the environment and reduce waste management costs
- Receive certification and contribute to ISO 14001 accreditation

We have experts who can specify, supply and install standard or bespoke oil and water separators to high standards.

Adler and Allan is one of the country's leading separator/interceptor service groups, working alongside blue chip organisations and major utility providers across the UK.

Related services include:

- Treatment plant installations
- Environmental plant maintenance
- Pumping station/sewage treatment maintenance
- Tanks and bunding solutions
- Fully qualified electricians

Professional pollution-prevention from the oil and environmental experts.
