# Fuel service solutions you can trust

**0800 592 827**  
24/7 Emergency Response

## Need a fast, flexible and reliable service?

Adler and Allan provides unrivalled fuel services. Delivering fuel oil and more, and a level of service others can only envy.

Because when it comes to an emergency, a power failure or supply loss, you don't want to be let down just when you need help the most.

So before you trust the reliability of your operations to any other supplier, consider the Adler and Allan Advantage:

- **24/7 emergency fuel supply** by contract, retainer, or ad hoc
- **24/7 response** through fully rostered Duty Managers
- **Guaranteed response times** for retained customers
- **Out of hours coverage** unlike larger, less flexible operators
- **On your doorstep service** with rapid response across Greater London and the Home Counties
- **Impressive fuel stocks** located in East London
- **Nationwide deliveries** through our syndicated network of associate suppliers
- **London area expertise** our drivers have outstanding knowledge of London roads, routes, and non-accessible challenges
- **Specialist fleet** from artics to drum deliveries to satisfy every customer need

These benefits are under-pinned by an investment in strategic fuel resources, a 'can do' attitude and a commitment to go the extra mile to deliver peace of mind and exceptional service.

## More than just fuel services

In addition to our fuel delivery services and emergency response, Adler and Allan also provides businesses and organisations across London with a range of complementary services. These include:

- 24 hour emergency spill response
- Spill kits and absorbents
- Fuel uplifts and transfers
- Tank Cleaning and Fuel Polishing
- Tank installation and maintenance
- Lubricants and greases

Our A+A divisions also offer waste oil management solutions, interceptor cleaning and general waste removal. For all-round service you can trust.

## Big enough to deliver, small enough to care

Don't take our word for it. These are just some of the customers who trust their operations and emergency power generation capability to Adler and Allan.

### Olympic Development Authority Contractors

### Telecoms, data centres and power supply

### Banks and other financial institutions

### Facilities management and property companies

## New legislation and biofuels challenges

The EU Bio-Fuels Directive specifies that a percentage of fuels is made up of a renewable component. Gas oil for non road mobile machinery will be required to contain no more than 10 parts per million of sulphur, bringing it in line with ultra low sulphur diesel. The majority of gas oil supplies to all users are likely to contain up to 7% bio-diesel from January 2011.

Bio-diesel will require a more frequent and higher standard of maintenance than standard diesel. Microbial growth and water may exacerbate localised corrosion. It may also result in the blocking of dispenser filters and fuel lines (as seen below).

## The Adler and Allan Fuel Quality Solution

Regular maintenance to keep your fuel in pristine condition

### Storage Tank Housekeeping

Tanks and associated equipment (eg lines, lids, filters, meters, valves) should be visually inspected on a regular basis for operational integrity.

The opportunity for water to enter your storage and distribution facilities must be minimized or ideally eliminated, so early and proactive identification of any potential sources of ingress can

prevent contamination and sludge problems developing.

### Fuel Maintenance

Regular sampling and testing of fuel should be undertaken to ascertain water content, discolouration or the presence of sediment. Subject to the results the solutions are – a full system integrity test, dewater/desludge or a complete fuel polish.

## The Adler and Allan Fuel Quality solution

To prevent the build up of microbial growth and the discolouration and degradation of bio-diesel, a preventative maintenance programme should be implemented. Adler and Allan has over 30 years experience in fuel quality and has become a market leader in advanced fuel polishing solutions.

Before and after fuel polishing

Our range of unique mobile tank cleaning and fuel polishing systems can treat from 3,500 up to 100,000 litres per hour.
