

Waste Management Policy

Adler and Allan recognise that if wastes are not securely contained and effectively managed, they can present health and safety risks and increase the risk of damage to the environment. As a responsible company that manages hazardous/non-hazardous wastes and may produce wastes as a result of our operational business,

It is our policy to:

- Apply the waste hierarchy principles of prevention; prepare for re-use; recycling; other recovery e.g., energy recovery; disposal.
- Accurately identify and classify different waste streams.
- Segregate different types of waste.
- Provide suitable storage arrangements for each type of waste, to ensure its security and containment.
- Clearly label waste containers as to their contents.
- Keep records of quantity and composition of different wastes.
- Provide permitted treatment of designated wastes to best industry practice.
- Maintain MCERTS accredited monitoring systems for our waste treatment facilities where required.
- Only transfer waste to those with the permitted authority to accept it and maintain Duty of Care checks.
- Pass an accurate description of the waste to the person removing the waste, and ensure they are a certified Waste Carrier.
- Keep copies of transfer/consignment notes for the movements of waste, making sure the documentation is fully completed.
- Maintain the storage arrangements for waste and to undertake periodic checks upon them.

Waste Management Procedure
